

## *Directing you towards a stronger safe patient handling program*

Lifting and moving patients, if not done properly, can result in substantial injury claims and risk patient safety. Still, all of the safe patient handling equipment in the world can't help your staff if they're not using it properly.

### **Creating a Roadmap**

AtlasGuide™, a web-based solution can identify risks before they become incidents. Used as part of your safe patient handling program, AtlasGuide™ can:

- Track injury rates and costs over time
- Define staff behavior and barriers to proper equipment use
- Measure competency levels
- Show cultural shifts
- Uncover pre-injury discomfort for early intervention
- Give employees online training for quick, easy reference

AtlasGuide™ makes what seems complex simple and clear. By uncovering the strengths and weaknesses of your program, you can see quickly what is working and where improvements are needed.

### **We Provide Direction**

With a clear map drawn for you, AtlasGuide™ can help you move forward. We show you exactly where you need to prioritize investment in

facilities, equipment, training, culture change, or other solutions. With AtlasGuide™ you can focus your resources on what matters most to improve your program results. Easy, cost-effective data based support you can implement today.

### **A Total Solution**

Use AtlasGuide™ as part of a broader plan to prevent injuries. We combine technology with personal support, services, and training to deliver the most comprehensive injury prevention program available to healthcare workers today. The result: healthier workers, safer patients, and lower injury and workers' compensation costs.
